

Project Title: Student Management System**Project Objective:**

To develop a simple and interactive web application that allows users to manage student records efficiently. The system will allow users to add, view, search, edit, delete, and organize student information using JavaScript.

Target Users:

- Students
- Teachers
- Faculty members
- Educational institutions

Main Features:

- Add student records
- Display student records
- Search students
- Edit student information
- Delete student records
- Form validation
- Calculate Pass/Fail result
- Sort students by marks
- Display total number of students
- Dynamically update the webpage

Technologies Used:

- HTML5
- CSS3
- JavaScript

Brief Description:

The Student Management System is a web-based application for managing student details such as name, email, course, and marks. JavaScript will store student records using arrays and objects and will dynamically update the webpage using DOM manipulation and events. The application will provide a simple and user-friendly interface for managing student information.
